Typical properties and applications

DOWEX MARATHON A anion exchange resin is specifically designed to give high throughput and economical operation in primary demineralizer beds. Because of its uniform particle size, this resin offers a number of economic advantages over conventional (polydispersed) resins. The small uniform bead size of DOWEX MARATHON A resin results in rapid exchange kinetics during operation, more complete regeneration of the resin, and faster, more thorough rinse following regeneration. It can be used for all types of water but especially for waters that have a high percentage of silica and carbon dioxide.

Packaging

For other temperatures use:

 $F_T = F_{77^{\circ}F} [1 + 0.008 (T_{\circ F} - 77)], \text{ where } F \equiv gpm/ft^2$ $F_T = F_{25^{\circ}C} [1 + 0.008 (1.8T_{\circ C} - 45)], \text{ where } F \equiv m/h$

For other temperatures use:

 $P_T = P_{20 \cdot C} / (0.026 \text{ T}_{\cdot C} + 0.48)$, where $P \equiv \text{bar/m}$ $P_T = P_{68 \cdot F} / (0.014 \text{ T}_{\cdot F} + 0.05)$, where $P \equiv \text{psi/ft}$

This could lead to anything from slight resin degradation to a violent exothermic reaction (explosion). Before using strong oxidizing agents, consult sources knowledgeable in handling such materials.
